## About Me

I am a PhD candidate in Education at the University of Bristol, working in the area of technology-enhanced language learning. My current research examines the role of virtual reality digital content creation in supporting vocabulary learning and learner engagement in EFL classrooms.

I am interested in how emerging technologies, especially virtual reality and artificial intelligence, can be meaningfully integrated into real teaching and learning contexts. My broader research interests include language learning, educational technology, learner engagement, vocabulary development, and computer-assisted language learning.

I am happy to hear from anyone interested in language learning, educational technology, virtual reality, or AI in education. Please feel free to get in touch by email if you would like to discuss my work, exchange ideas, or explore possible collaboration.

## Research Interests

- Technology-enhanced language learning
- Virtual reality in education
- AI-assisted language learning
- Learner engagement
- Vocabulary learning
- Computer-assisted language learning
